

Recovery made easy through expert, managed data protection

Backups don't matter. No really, backups are not important. What is important is recovery. Most organizations become complacent because they have a backup solution in place, and unaware they are vulnerable to slow and incomplete recovery of critical data. Your backup does not matter if you cannot recover 100% of protected data in the event of a disaster.

Protelligent's CloudDR™ provides true business continuity. No matter what the disaster, from a deleted file to an office fire, CloudDR ensures that your organization will be back to work with minimum data loss as efficiently as possible. Local backups allow for rapid restore of data. Offsite replication ensures recovery in the case of local unavailability. Cloud restoration ensures that your organization can get back to business even if your local servers are gone.

Our IT backup experts manage the entire data lifecycle, leaving you to focus on what matters - getting your organization back to work.

Local Backup and Restore

A complete, encrypted backup of your systems and data reside at your premises. This ensures rapid recovery in the event of data loss.

Offsite Replication and Recovery

The complete, encrypted backup stored at your premises is replicated to Protelligent's secure data centers. This ensures data recovery anywhere there is Internet connectivity, in case local recovery is not an option.

Cloud Restoration for Business Continuity

In the event of a major disaster (i.e. fire, flood, theft) your entire environment can be restored to Protelligent's secure, private cloud, allowing staff to quickly get back to work with minimum loss of business data.

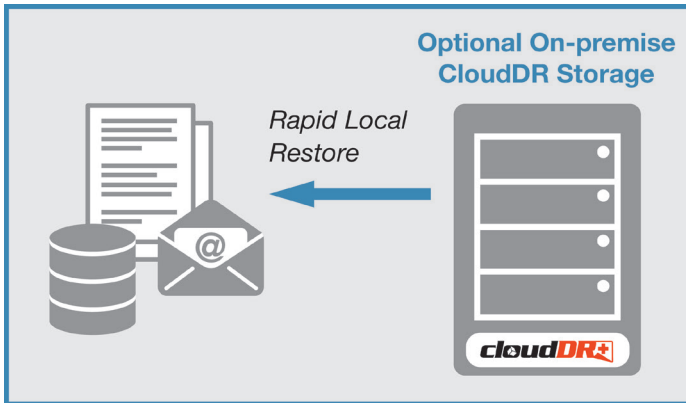

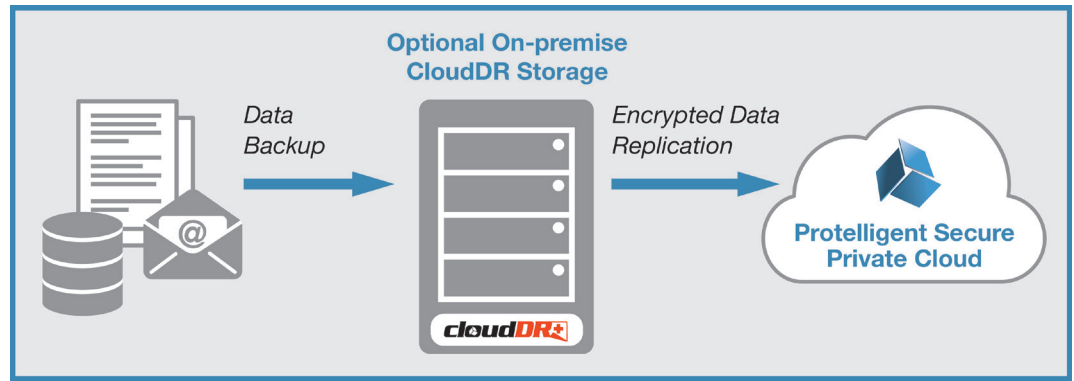

SECURE, RELIABLE DATA RECOVERY

"As a medical device manufacturer, prevention of data loss is particularly important as there are regulatory implications in addition to business continuity concerns. I chose Protelligent's CloudDr because we needed a reliable, fully-managed, and cost-effective solution that ensured 100% of our data would be recovered and our business would be back up and running quickly, in the event the unthinkable happened."

Hugh Neuharth
Sonendo, Inc.

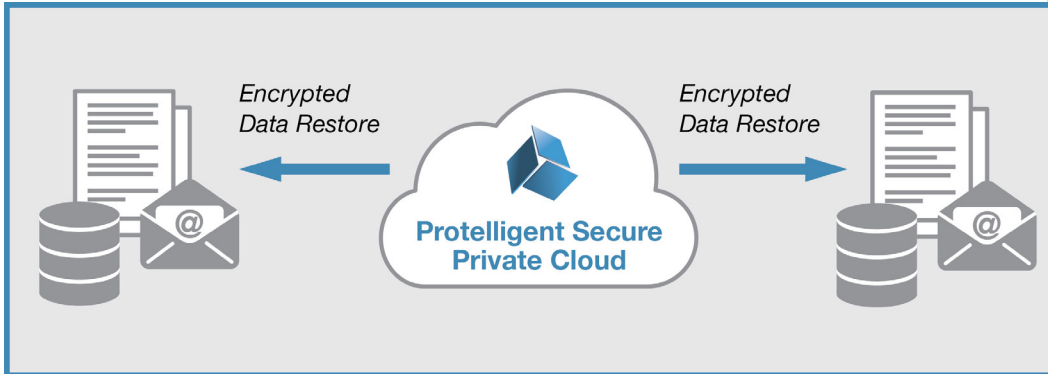

Functionality

Your business data encrypted and backed up to your on-premises CloudDR server. Encrypted backup replicated to Protelligent's out-of-region secure, private cloud.

Rapid local restore of data from the on-premise CloudDR server by Protelligent systems engineers or your IT staff.

Reliable data restore from the Protelligent secure, private cloud back to your premises or anywhere with an internet connection.

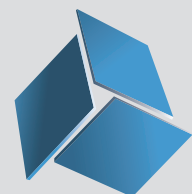

Advanced disaster recovery and business continuity in the event of local disaster (fire, flood, theft, etc.). Staff access data and applications directly from Protelligent's secure, private cloud allowing your organization to get back to business.

OUR APPROACH

Protelligent's approach is recovery made easy through expert, managed data protection and rapid restore system.

Protelligent's CloudDR offers clients peace-of-mind with on-premise CloudDR server, secure data restore with private cloud, and advanced disaster recovery system in the event a local disaster strikes your business. A guarantee your organization will be back to business quickly.

High-Performance Backup

- Cross-platform, high-performance backup and recovery solution with broad operating system and virtual server platform support
- Encrypted, deduplicated data transport optimized for offsite WAN replication

Bare Metal Recoveries

- Cost-effective and rapid disaster recovery to similar and dissimilar hardware
- Supports P2V, V2V for VMware, Hyper-V based VMs for virtual recovery

Built-in Offsite Backup & Replication

- Replicate multiple point-in-time backups to Protelligent's secure cloud for offsite backup and business continuity purposes

Built-in Virtual Platform support

- Supports all virtual platforms including Microsoft Hyper-V, and VMware
- Plus we can back up servers on any platform

Restore Options

- Virtually recover your data as a virtual hard disk or VM
- Granular recovery
- Restore an entire server, database, file, or email message
- On-going test recoveries for DR validation

Broad Platform Support

- Windows, Mac, Linux

Enhanced Security

- On-the-fly encryption of data (in transit and at rest)
- Blowfish and AES encryption algorithms
- up to 448-bit military level encryption

SECURE PRIVATE BACK UP

"The California JPIA is a risk sharing pool for more than 120 local government entities throughout the state. We rely on Protelligent's CloudDR to protect against data loss through off-site storage because their system is a secure, private infrastructure."

about us

Founded in 2002, Protelligent seeks small and medium-sized organizations and invests in long-term customer relationships by delivering best of breed technology solutions and taking responsibility for every objective it recommends and implements for its clients.

Protelligent has invested millions into its own capital, technologies and best practices and procedures to outperform competition and become a pivotal internal advisor in its clients' business success. Protelligent owns the entire infrastructure that provides cloud services, making them a unique managed IT service provider. This competitive advantage insures an "always-on computing experience" that supports their clients' business needs.

Protelligent is committed to helping its customers build and maintain the best possible end-user experience at the lowest possible cost. It recommends business solutions that only Protelligent itself would pull the trigger on for its own business. It is this type of personal guidance and strategic vision that clients trust and depend on. This is why Protelligent's client retention is second to none in the industry and how Protelligent can depend on lifetime referrals.

Discover why so many big brands are turning to Protelligent for the best and brightest in Managed IT, Cloud Services and Datacenter Hosting, Cloud Backup Virtualization, IP Telephony, Security, and IT Professional Services.
